

Title of the Project: Event Management System

Group Number: 14

Group Members: 02

Student ID	Student Name
18101542	Hamim Shabbir Halim
18101531	Shawon Saha

System Request

Project sponsor:

- Kalleen - Founder and CEO
- Tony Stark - Chief Financial Officer

Business need:

This project has been initiated to reach organizations and allow them to increase their business facilities and offer better service to web consumers for those who want a personalized event to be hosted or held at their chosen time.

Business requirements:

Customers will be able to host a personalized event by visiting this website. Below are the features that the program will provide:

- Sign In and Sign Up for both organizations and customers.
- Organizers can put pictures of their events.
- Customers can view previous hosted events pictures from the organizer.
- Customers can customize their needs. For example event's place, time, decorator, catering service, food menu, sound system, photographer, cinematographer, etc.
- The system will show an estimation of the total cost of the event.
- Promo Deals and Special offers for customers.
- Customers can send their feedback or show reviews of other users.
- Digital payment systems like credit card or bKash etc.
- Customers can hire security services for the event.

Business Value:

We can make profits from vendors. For example, we can generate revenue from food, decor, photography, sound, media service, card printing, and so on at a wedding event. Our customers can choose the venue of their event from the vast list of our clients or they can host an event in their place.

Tangible values:

Per Event:

10% commission will be taken from catering services, sound system providers, and venue.

10% commission will be taken from the decorator and rent a car service.

5% commission will be taken from the photographer, cinematographer, artist.

Intangible values:

We will ensure quality service with the aid of customer reviews, which will help us to win the confidence and reputation of people. For that cause, there will be more vendors involved in collaborating with us.

Special issues or constraints:

As most of the event occurs in the winter season. This project needs to finalize before the second week of December.

Requirement Analysis

Event Management System

We have managed to develop a website for both our clients and customers so that they can create/pick their services quickly. We also added some functionality based on what we are going to start working on.

Functional Requirement:

1. Registration:

To enter into this site user has to register himself first. Requirements of registration are first name, last name, username, email-id, password, confirm password.

2. User Login:

The System provides the facility to login into the system. Users have to input their username and password to get into the home page.

3. Logout:

The system provides the facility to logout from the site. The users will get a logout button to sign out from the system.

4. Forgot Password:

The user can send a reset link to the mail id to reset the password. By inputting an email id a reset link will send to that address.

5. Notification/updates:

Users will get to know any notification, recent updates, or important messages, or promotional deals through e-mail.

6. Sort by price, rating:

Users will be able to sort their service by price or by rating or both together.

7. Cost estimation based on demand:

Users will be able to customize their service and they will get the estimated cost for each service they choose.

8. Catalog based on service and product:

Users will be able to see catalogs of services and vendors. From that users will be able to select services according to their choice and select their preferred vendors and vice versa.

9. Search Engine:

Users can search for products, vendors, and services.

10. Time Slots:

Time slots for the availability of a place or venue on which event going to be held.

11. Customer Rating:

Users will have the ability to rate services and vendors so that we can improve the system and understand the user's needs.

Non Functional Requirement:

Operational:

1. For both customers and sellers, the system should support the latest versions of all popular web browsers.
2. Webpage should be developed base on Web Content Accessibility Guidelines (WCAG) 2.1 Standard.

Performance:

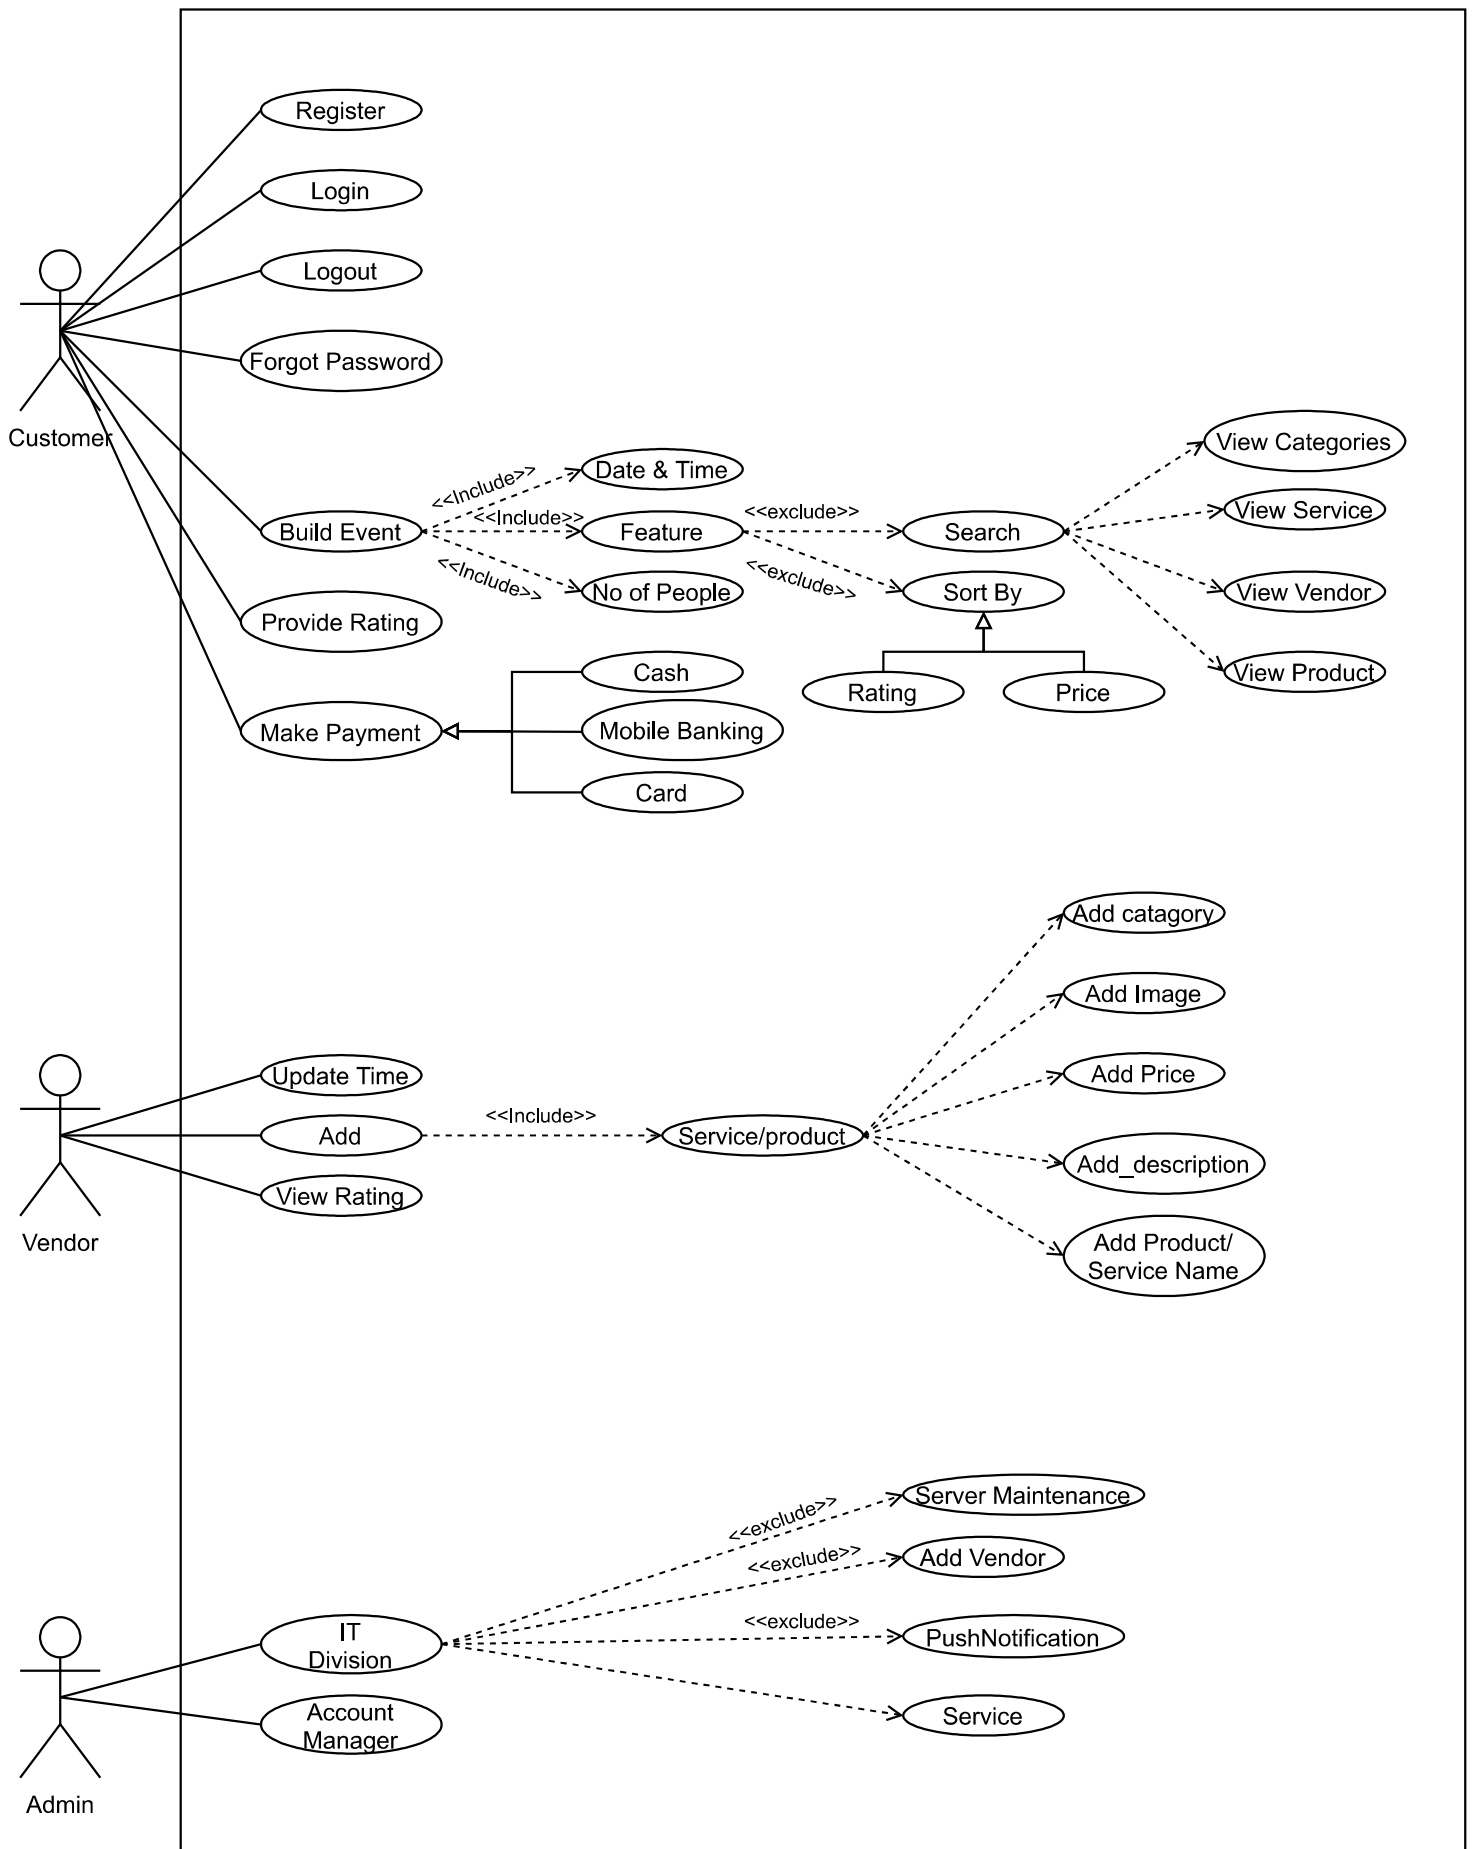

1. 24/7 Live customer support center.
2. The system will receive updated schedule information every 2 seconds.
3. Servers should be situated in Bangladesh for low latency.
4. Any interaction between the user and the system should not exceed 2 seconds.

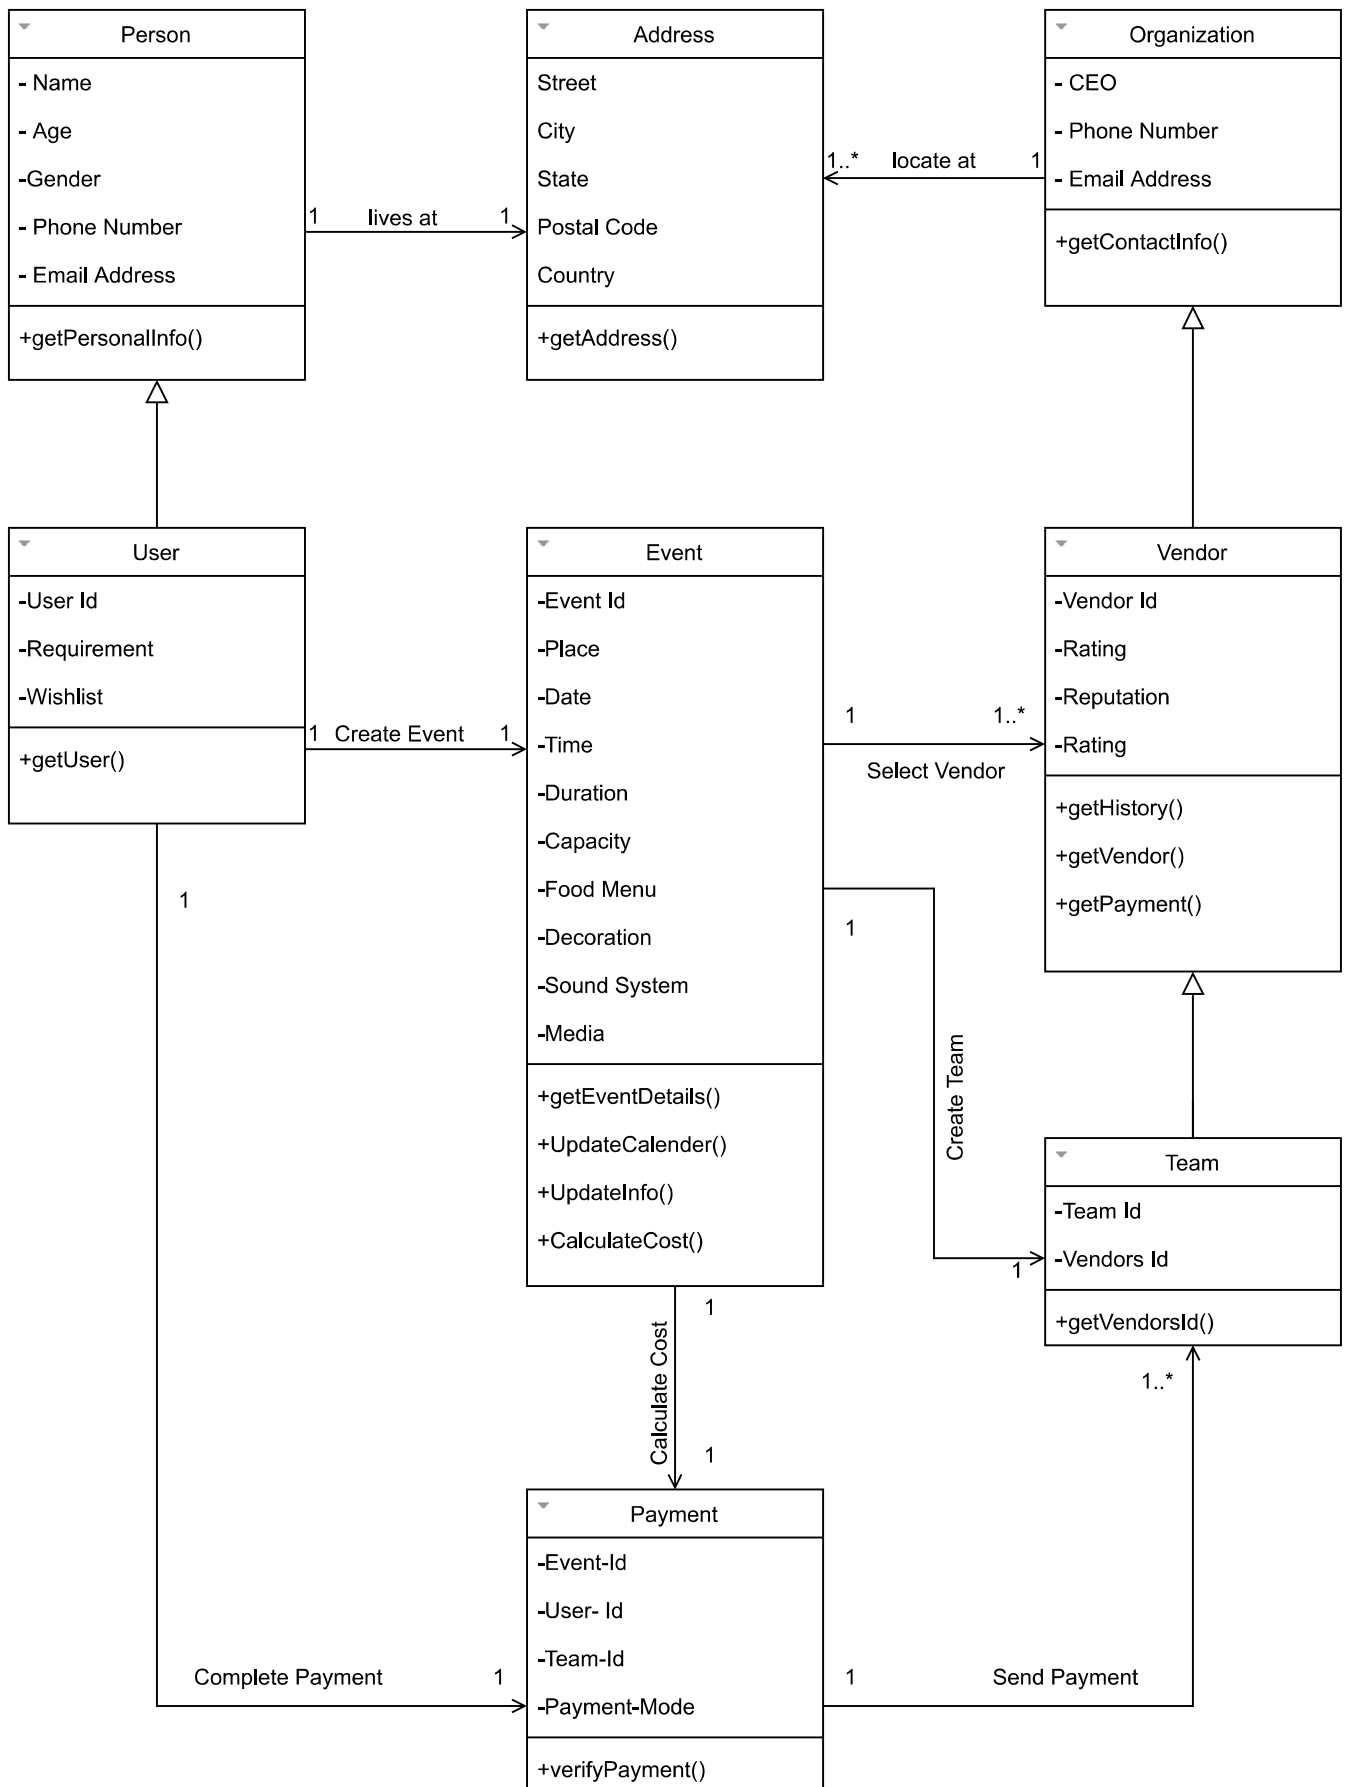

Security:

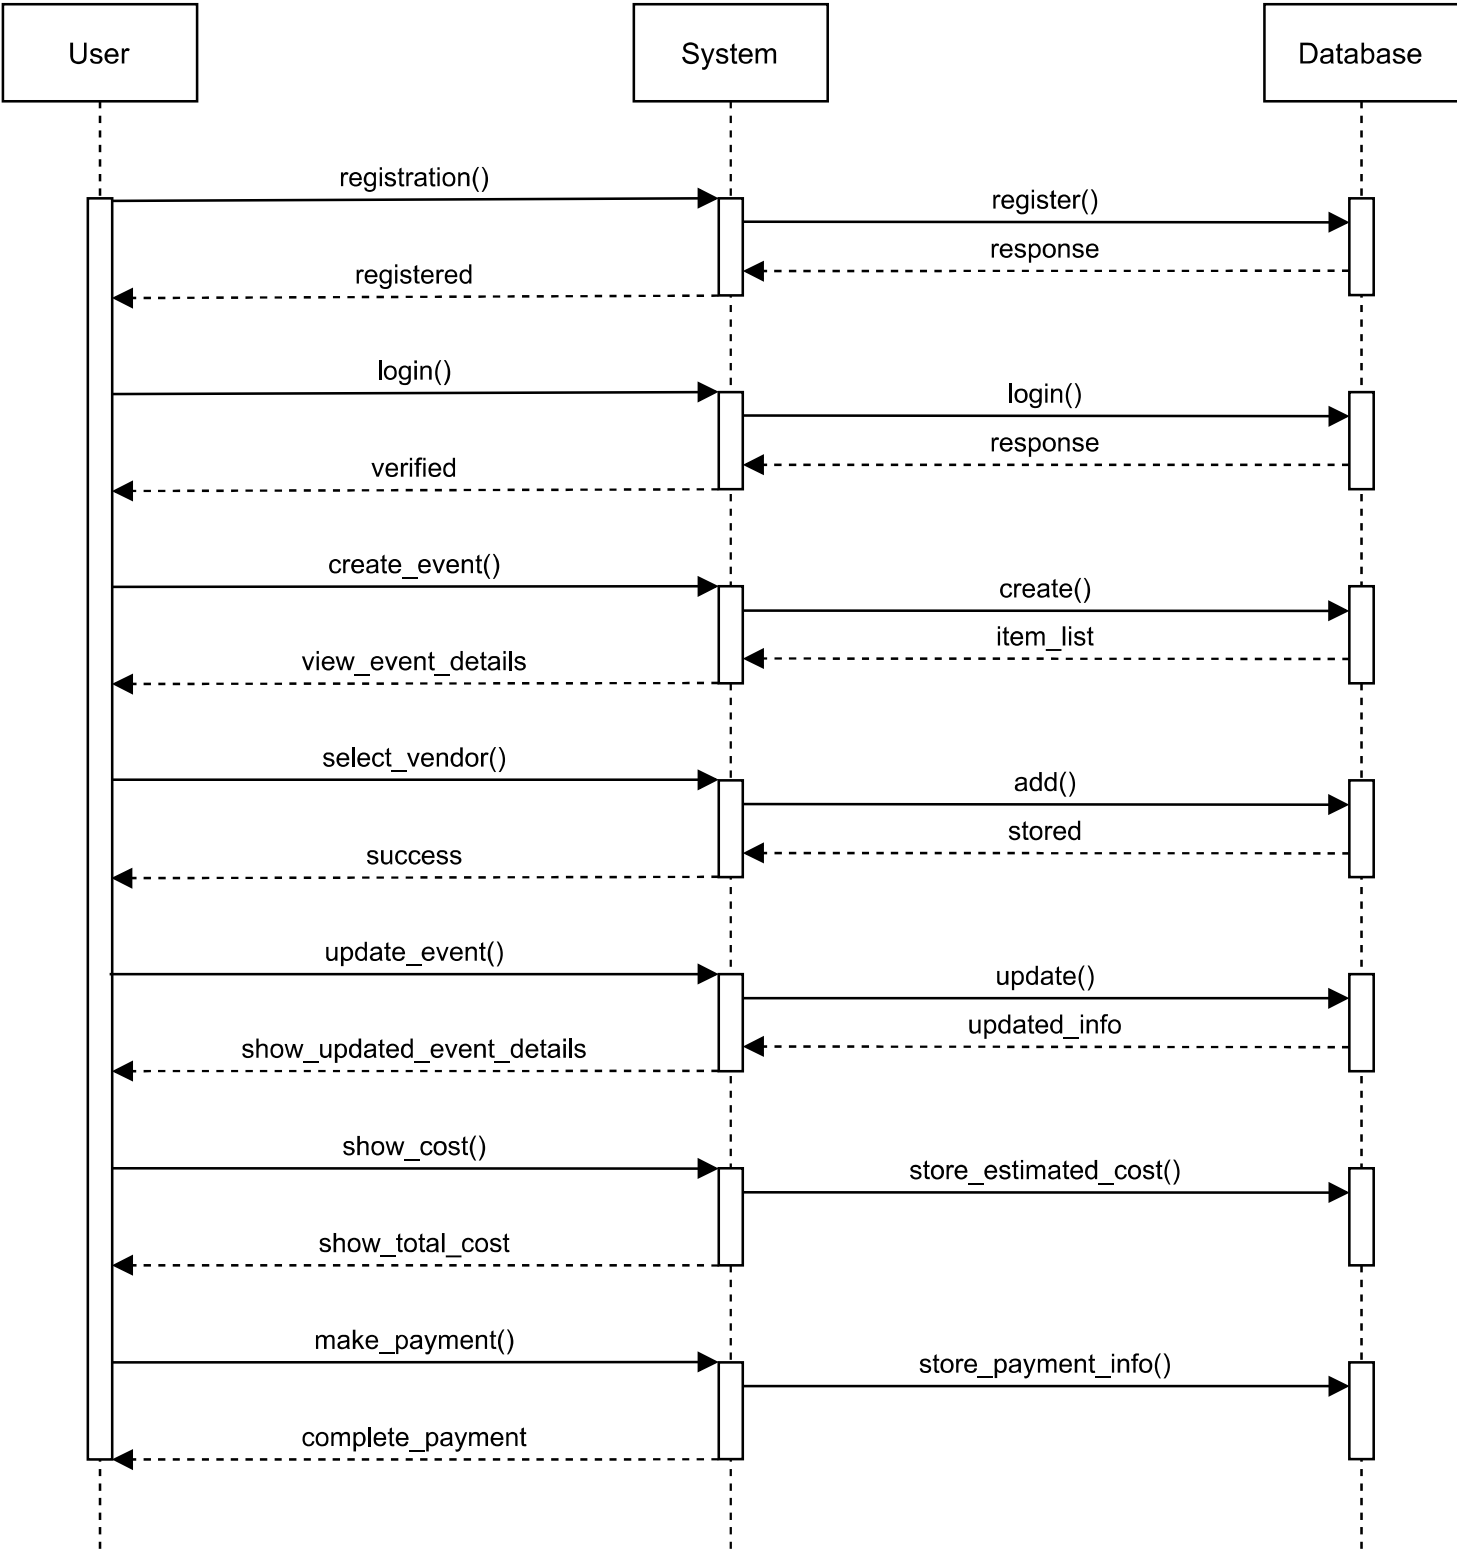

1. All digital transactions should be secured with SSL protocol.
2. The user's password should be stored encrypted by bcrypt algorithm.
3. The system will automatically log out users every 15 days.
4. Email alert for login from a new device.
5. At least two copies of backup of the whole database should be kept.
6. Two Factor Authentication support for both the phone number and email.
7. Should integrate DDoS protection.
8. All traffic should be routed through HTTPS.

Cultural and political:

1. Illegal products or events promotion should be banned.
2. The system should not hurt any social, cultural, or religious sentiments.
3. The system will only support the customer who is from Bangladesh.
4. Should support both English and Bengali language.
5. The system should abide by the local government money transaction policy.
